To Control Onion Maggot Infesting Onions (Dry Bulb)

ATTENTION

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Lorsban[®]-4E before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Lorsban-4E according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Lorsban-4E.

Directions for Use

General Information and Mixing Instructions: Lorsban-4E insecticide is recommended for use to control onion maggot infesting onions (dry bulb). Use Lorsban-4E by thoroughly mixing with water to form an emulsion spray or drench. Refer to the label for Lorsban-4E for mixing instructions.

Use and Dosage Recommendations: For early season application on onions (dry bulb), use Lorsban-4E at the rate of 1 quart per acre (equivalent to one pound of chlorpyrifos per acre) and apply as a directed spray to the base of onion seedlings or transplants during peak egg laying by the onion maggot adult. Proper timing of the insecticide application is essential for satisfactory control. Use a minimum of 100 gallons of total spray per acre for thorough wetting of the soil at the base of the plants.

Restrictions: Do not make more than one directed spray application if Lorsban-4E or Lorsban 15G was used at planting. Do not use within 60 days of harvest or apply more than 2 pounds of chlorpyrifos per acre per growing season.
